

FEL UE5 Build Pipeline — Status Report

Date: April 1, 2026 | **Instance:** 192.222.52.171 (Lambda Cloud)

● **BLOCKER: EpicGames/UnrealEngine Repository Access Denied**

The build pipeline **cannot start** because the GitHub token cannot access the private `EpicGames/UnrealEngine` repository.

Diagnostic Results:

Check	Result
----- -----	
GitHub User	Elijahbonds ✓
Token Type	Fine-grained PAT (<code>github_pat_*</code>) ⚠
EpicGames/UnrealEngine API	HTTP 404 ✗
<code>git ls-remote</code> test	"Repository not found" ✗
EpicGames org membership	None ✗
Pending org invitations	None ✗

⚡ **Fix Steps (Must Complete ALL 3)**

Step 1: Link GitHub to Epic Games Account

1. Go to <https://www.unrealengine.com/ue-on-github>
2. Sign in with your **Epic Games account**
3. Click **"Connect"** next to GitHub
4. Authorize the connection with your GitHub account (`Elijahbonds`)
5. You should see a confirmation message

Step 2: Accept the GitHub Organization Invitation

After linking, Epic Games sends an invitation to join their GitHub org:

1. Check your email for an invitation from **@EpicGames**
2. **Or** go directly to: <https://github.com/orgs/EpicGames/invitation>
3. Click **"Accept invitation"**
4. Verify membership at: <https://github.com/orgs/EpicGames/people> (search for your username)

Step 3: Create a Classic Personal Access Token

Fine-grained PATs (`github_pat_*`) **do not work** for Epic Games org repos. You need a **classic** token:

1. Go to <https://github.com/settings/tokens>
2. Click **"Generate new token"** → **"Generate new token (classic)"**
3. Give it a name like "FEL UE5 Build"
4. Select scope: `repo` (Full control of private repositories)
5. Click "Generate token"
6. Copy the token (starts with `ghp_`)

Step 4: Update Token on Lambda Instance

SSH into the instance and run:

```
cd /home/ubuntu/rork-final-evolution-lab
./scripts/check_and_build.sh --update-token ghp_YOUR_NEW_TOKEN_HERE
```

If access is confirmed, launch the build:

```
./fel_ue5_complete_build.sh 2>&1 | tee logs/build_output.log
```

Or use the auto-build option:

```
./scripts/check_and_build.sh --update-token ghp_YOUR_TOKEN --auto-build
```

✓ Everything Else is Ready

Component	Status
Lambda Instance (8x V100)	✓ Online
Hardware (88 CPUs, 440GB RAM, 5.7TB disk)	✓ Verified
Build Dependencies (git, cmake, clang, make, mono, python3)	✓ Installed
Project Files (8,852 generated assets)	✓ Present
Build Script (fel_ue5_complete_build.sh)	✓ Ready
EditorPython Import Scripts (12 scripts)	✓ Ready
Video Assets (30 files)	✓ Present
.uproject File	✓ Present

Expected Timeline Once Access is Granted

Time	Phase
T+0:00 — T+0:15	UE5 Source Clone (~3GB shallow clone)
T+0:15 — T+0:45	Setup.sh (download dependencies ~30GB)
T+0:45 — T+3:00	Engine Build (make -j16, ~2 hours)
T+3:00 — T+3:30	Asset Import (567 assets via EditorPython)
T+3:30 — T+5:00	Linux Server Cook (Pixel Streaming)
T+5:00 — T+5:30	iOS Cook (ARM64)
T+5:30	🚩 BUILD COMPLETE
